

Attributes of a system

Visible to a programmer.
(Pgmr knows its presence)

2. Direct impact on →
Logical execution of a program

3. Used as ISA

* Instruction set Architecture; Instruction formats, instr. opcodes, registers, instruction and data memory.
* Effect of execution instr. on registers and memory.

→ Algorithm for controlling instruction execution.

4. Logical Components:

Instr. set, addressing modes,
Data types, cache optimization.

Organization

⇒ Operational Units & their interconnection according to implementation of archit...

Structure: Components interrelate হওয়ার way.

Function: Operation of each individual component.
