I/O module Functions:

Control & timing: coordinate flow of data as system bus & M.M are shared between activities.

Processor communication:

- command decode
- data exchange
- address recognition
- report states of peripherals

Device communication:

command
status info
data

Data Buffering:

for synchronization betw^n the

different speeds of internal & external devices.

Error Detection

electrical malfunction

changes in transmitted data - by parity bits.

Programmed I/O
