Data isolation

Integrity: set of Rules to be followed.

→ Restrictions.

Fx: Below 2 eg can't give exam.

Atomicity:

Transaction: set of operations with property "All or nothing"

fig.txt

A user.

User B

Read only

→ no way to give access only 3 fields except salary in file system.

Data Abstraction:

↓

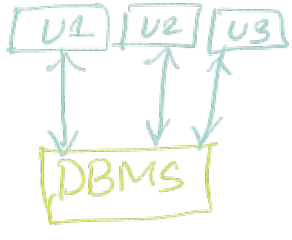

Hiding data.

Physical

logical

view level → partial view of database

1st database → 2-tier architechture.

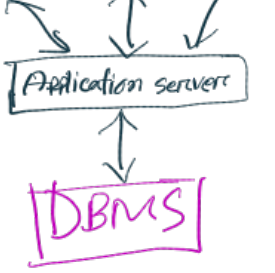

→ very fast

→ Difficult to maintain.

→ Do evrth. manually.

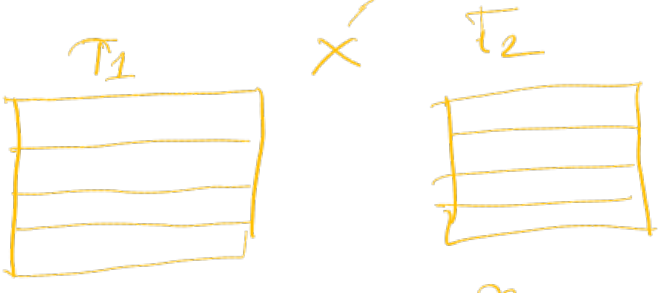

Data warehouse & Mining → Taking input & giving decision.

NoSQL → not only SQL

Big data Analysis → Cross product → bigger number.

Rtnal dB → combines them.

↓

not feasible for search engines.
