Vectors

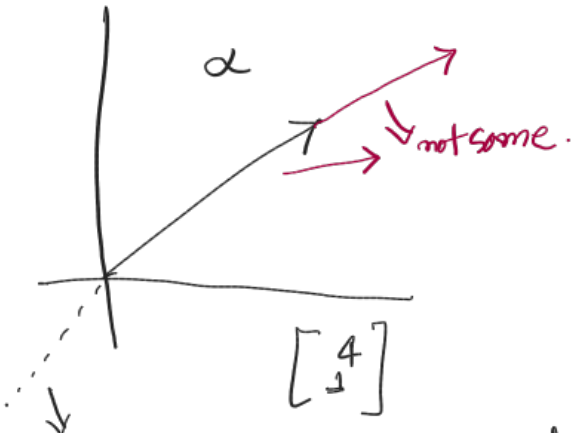

Adding & Multiplying
→ no other way.

null vector in 3D → $\begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$

nD → $\begin{bmatrix} 0 \\ \vdots \\ 0 \end{bmatrix}$

$\bar{A} + \bar{A} = 2\bar{A}$

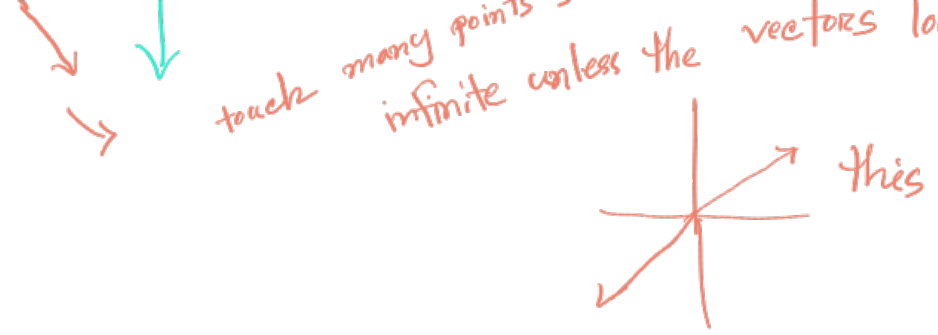

can't escape this line so scaling by any scalar will create finite infinite vectors.

Adding any 2 vectors → create infinite vectors.

touch many points
infinite unless the vectors look like
this
